WORK EXPERIENCES

BACKEND SOFTWARE ENGINEER | SHOPEE SINGAPORE

June '22 - Present

- Led a team of 4 and guided key business decisions driving ~80% of Shopee's [quarterly revenue](#) involving 100+ stakeholders.
- Designed a distributed counting service enabling high-availability delta updates with full audit and reconciliation support.
- Boosted development time by over 25% with config-based code implementation for Shopee's tax compliance across 12 regions.
- Built a Python-based automated campaign observability reporting service, leveraging Prometheus/Thanos, Jenkins, and Seata.
- Drove the migration of 10 billion rows and 3 TB of Settlement System primary databases across 14 regions from TiDB to MySQL.
- Kickstarted the idea of using Clickhouse as a secondary database within the team for analytical and online queries, replacing Elasticsearch, saving up to 88% in storage usage and improved query performance.

FRONTEND SOFTWARE ENGINEER INTERN | SENSETIME SINGAPORE

Dec '21 - Mar '22

- Built a commercial website from scratch to showcase SenseTime AI photo technology tools to stakeholders.
- Designed a simplified Photoshop-like photo editor that integrates multiple SenseTime AI technologies (such as image sharpening and generative fill) into the webpage using Reactjs.

BACKEND SOFTWARE ENGINEER INTERN | SEA SINGAPORE

May '21 - Aug '21

- Created a filesystem that implements Linux FUSE interface using JuiceFS and our filestore engine as the data storage in Golang.
- Developed a filestore and blockstore CLI engine optimized for efficiently storing numerous small files, outperforming MinIO in CRUD performance using Rust.

DATA SCIENCE INTERN | SHOPEE SINGAPORE

Dec '20 - Apr '21

- Created a neural network that performs Named Entity Recognition (NER) tagging to benchmark against existing pretrained shopee-roBERTa models, demonstrating a 3% F1-score improvement in overall entity tagging accuracy.
- Analyzed multiple traditional and state-of-the-art neural machine translations against Shopee's human translation datasets.
- Built a model on Semantic Similarity problem using sentence-transformers to predict whether two product title sentences share the same category id using Python.

BACKEND SOFTWARE ENGINEER INTERN | SAP ML FOUNDATION SINGAPORE

Jan '20 - Jun '20

- Implemented a performance test tool (Vegeta) to run performance test of numerous model servers deployed in SAP DI Cloud.
- Designed and developed logging and statistics endpoints on profiled data to enable early detection for errors and live data endpoints update for analysis in Python.

EDUCATION

NATIONAL UNIVERSITY OF SINGAPORE '22 | Major in Software Engineering and Artificial Intelligence

Awarded a tuition grant and graduated with a Bachelor of Computer Science, Hons (Distinction)

- Led a team of engineers across 4 different software engineering modules at NUS ([CS2103](#), [CS3219](#), [CS4218](#), [CS4225](#)).
- Developed an Android and iOS online chat drawing app that implements VoIP services and Google Firebase as the database.
- Coached a team of more than 10 students and represented Computing to win 1st as a team in the Othello Inter-Faculty Games.

ACHIEVEMENTS

IMC Prosperity3.0 World Trading Competition | [Top 1% from 20,389 teams](#)

May '25

IMC Prosperity2.0 World Trading Competition | [Top 4% from 10,007 teams](#)

May '24

Grab Business Case Challenge Competition | [3rd place team winner](#)

Apr '21

NUS Data Science Competition | [1st place team winner](#)

Jan '21

JP Morgan Code for Good Competition | [1st place team winner](#)

Oct '20

Shopee Code League Sentiment Analysis Competition | [Top 2% from 350 teams](#)

Jul '20

Singapore Mathematical Olympiad: Open Section | [Silver Award](#)

Nov '17

SKILLS

Python, Golang, Java, Rust, Javascript, Ruby | React, Android, Django, TensorFlow, Ruby on Rails
